

## **4D Molecular Therapeutics Announces Closing of Initial Public Offering and Full Exercise of Underwriters' Option to Purchase Additional Shares**

December 15, 2020

EMERYVILLE, Calif., Dec. 15, 2020 (GLOBE NEWSWIRE) -- 4D Molecular Therapeutics, Inc. (4DMT), a clinical-stage gene therapy company harnessing the power of directed evolution for targeted gene therapies, announced today the closing of its initial public offering of 9,660,000 shares of its common stock, including 1,260,000 shares sold pursuant to the full exercise of the underwriters' option to purchase additional shares, at a price of \$23.00 per share. The aggregate gross proceeds of the offering were approximately \$222 million, before deducting underwriting discounts and commissions and other offering expenses. The shares began trading on the Nasdaq Global Select Market on December 11, 2020 under the ticker symbol "4DMT."

Goldman Sachs & Co. LLC, BofA Securities and Evercore ISI acted as book-running managers for the offering.

### **About 4DMT**

4DMT is a clinical-stage gene therapy company pioneering the development of product candidates using targeted and evolved AAV vectors. 4DMT seeks to unlock the full potential of gene therapy using its platform, Therapeutic Vector Evolution, which combines the power of directed evolution with approximately one billion synthetic capsid sequences to invent evolved vectors for use in targeted gene therapy products. The company is initially focused in three therapeutic areas: ophthalmology, cardiology, and pulmonology. The 4DMT targeted and evolved vectors are invented with the goal of being delivered through clinically routine, well-tolerated and minimally invasive routes of administration, transducing diseased cells in target tissues efficiently, having reduced immunogenicity and, where relevant, having resistance to pre-existing antibodies. 4DMT is currently conducting three clinical trials: 4D-125 is in a Phase 1/2 clinical trial for XLRP, 4D-110 is in a Phase 1 clinical trial for choroideremia and 4D-310 is in a Phase 1/2 clinical trial for Fabry disease.
